

Demand for indium in solar panels

Overview

Third, indium is a critical ingredient in CIGS thin-film solar panels, which industry estimates suggest could add 200–400 tonnes of annual indium demand by 2027 — meaningful relative to total global primary production of around 900 to 1,100 tonnes per year. The increasing need for indium in photovoltaic technologies is set to exceed available supply. Current estimates suggest only 25% of global solar cell demand for indium can be met, posing a significant challenge for the energy transition. Using the WORLD7 model, this study evaluated the. Over the past three years, this lesser-known strategic metal has delivered a steady performance that's hard to ignore: +26.82 % year-to-date (October 2025) according to SMI's price series (check out the latest Indium prices and charts here). Indium has quietly become one of the most strategically constrained.
