

South Africa Energy Saving and Storage Project

Overview

South Africa has reached a major milestone in its renewable energy transition, as three cutting-edge Battery Energy Storage System (BESS) projects, collectively known as Oasis, progress toward implementation, strengthening grid capacity through battery energy storage. Eskom officially opened the Hex BESS site at Worcester in the Western Cape yesterday. The Hex BESS is the first project to be. Ongoing capacity shortages and load shedding have plagued South Africa for most of the past ten years, caused by declining availability of its ageing coal fleet. Load shedding is the deliberate stoppage of electrical power supply by system operators as a preventive measure to maintain system. Eskom and Energy Vault are announcing an agreement to deploy a gravity storage system at the Hendrina Power Station in Mpumalanga province, South Africa, with intention to license, co-develop and partner to deploy up to 4GWh of long duration energy storage across 16 SADC member states. The Eskom confirmed the award of contracts for the provision of battery storage solutions in terms of its flagship BESS project in July 2022. The contracts were awarded to Hyosung Heavy Industries, of South Korea, and the Pinggao Group, of China.
